

26 October 2021

Strategies for Elimination of NTDs

1. Mass Drugs Administration (MDA)

2

NTD programme phases

Mapping

Health promotion & education

MDA

Surveys

Patient tracking

Disease detection

CBM Christian Blind Mission

Mapping phase

Apps:

LINKS (NTD Mapping Tool from NTD Support Center), other mapping tools.

Digitalisation:

- Visualize the geographical distribution of NTDs;
- Identifying priority areas requiring mass drug administration;
- Identifying areas for co-implementation of control activities;
- To visually explore the relationship between NTDs and water and sanitation;
- Tracking progress in NTD control.

Apps:
Audio Pedia

Digitalisation

- Open-source solution providing accessible knowledge in localized & easy-to-understand language across the globe (push & pull)
- Technical framework allows for customization to contextual needs such as ICT infrastructure, cultural specifics and target groups
- Applies Digital Principles for Development

Apps:

ESPEN Collect; Supervisors' Coverage Tool (SCT); mHealth applications

Digitalisation

- Data Collection
- Monitoring of MDA

Apps:

ESPEN Collect; Tropical Data; Other tailored data management tools (eg Kobo Collect, EpiCollect, Commcare, etc), with GIS technology.

Digitalisation:

ESPEN Collect:

- Free mobile data collection tool for the national programs, NGOs, partners.
- Designed to collect data for the Preventive Chemotherapy NTDs LF / Oncho / SCH / STH.
 - coverage surveys,
 - impact surveys,
 - epidemiologic and entomologic surveys
 - transmission assessment surveys.

Tropical Data: Support of **Trachoma** programmes through the full survey process

Patient tracking phase

Apps:

TT Tracker; Hydrocele Tracker

Digitalisation:

TT Tracker: Helps surgeons, assistants and supervisors to collect and analyze information about TT surgery and performance.

Hydrocele Tracker: Identical to TT Tracker, developed for hydrocele patients care

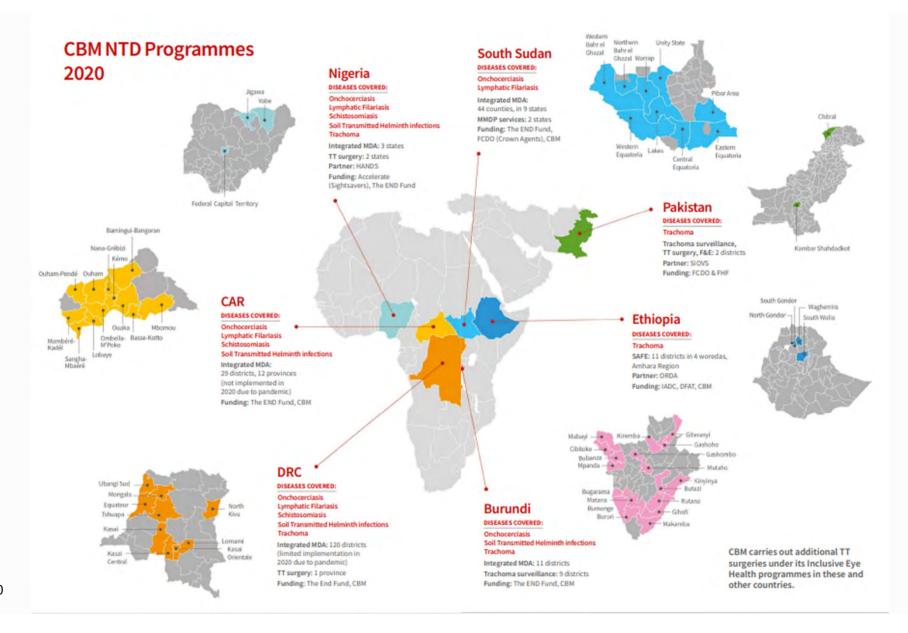

Disease detection phase

Digitalisation:

Supports and empowers front-line health workers in the recognition of the early signs and symptoms of skin diseases

Use of digital tools in selected countries-select examples

Programme Phase	Digital Tools	Application at the Country-Level		
		RSS	Nigeria	DRC
Mapping	Tropical Data, LINKS	Through techincal partners	Through technical partners	With WHO support & MOH
Mass Drug Administration	ESPEN Collect	Through technical partners	Through technical partners	Not applied
	Supervisors' Coverage Tool (SCT)	Not applied	Through technical partners	Not applied
	mHealth applications	Not applied	Through technical partners	Not applied
Epidemiological surveillance surveys	ESPEN Collect	Through technical partners	Through technical partners	Not applied
	Tropical Data	Through technical partners	Through technical partners	ESPEN & MOH
	Other tailored data management tools (Kobo Collect, EpiCollect, Commcare, etc.) with GIS technology	Through technical partners	Through technical partners	Through technical partners
Patient tracking	TT Tracker	Not applied	Through technical partners	Not applied
	Hydrocele tracker	Not applied	Not applied	Not applied
Disease detection	SkinApp	Not applied	Not applied	Not applied

Opportunities through digitalisation of processes

- Increased effectiveness and efficiency of health programmes;
- Increasing capacity (infrastructure, HR) on health programme management;
- Including all countries on progressing to elimination of NTDs through upscaled digitalisation;
- Identifying and including <u>all</u> affected persons in patient care programmes.
